

running private copy? who is the operator?

Phil's project - access plan / roadmap
- EGO transition - policy suggested to result in all staff some time

MCS Ticket sweepup. RPA's.
any way to capture time spent?

Stefan / Daniel - Beam model + Ben, Robert
model, cap. to gen visibility
Included Param values

Present model params - long surface, but $\text{red temp} < 1 \mu\text{K}$

Pol mode dispersion model?

Alma LO dist system - delay, not amplitude
U. Bologna work?

→ need physics model first.

Q's to answer:

Δ gain sensitivity - ang, delta vs Flux Transf
Comparison to beam model change

- add a forward model to take out dynamic change
- Compare to pointing - caused beam gain change
- delay data will only do one or 2 fibers, may not be too useful in operations
- static table of temp. sensor
- extend statsim to include static cal
- Package to include beam, temp. data
- DIP feature points to curated and load input data
- Ben will expand existing feature for local model
- write new feature to extend statsim + package/document
- try to get some ATUS data to condition it?
